# PALLET SUPPORT BEAMS

Pallet support beams are designed to add strength to your racking system, while supporting the center of the wooden pallet & providing a useful guide for putting pallets away.

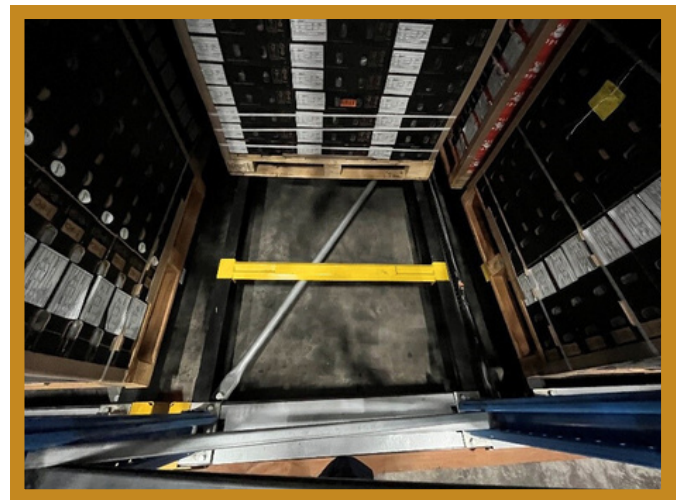

They are particularly popular for the disposable pallets, especially on the upper pallet level.

## Did you know?

Racking is generally designed to support GKN Chep Code 1 four-way pallets as delivered from a GKN depot.

In practice pallets entering a warehouse can be damaged & costs are pressurizing exporters to use even lighter “disposable” pallets where corner blocks have shrunk to as little as 70 mm<sup>2</sup>

Pallet support beams (PSB) are primarily designed to prevent pallets from sagging in the middle when stored with the 1000 mm side facing 1200mm deep in mobile racking.
